

# Connections for developers

How we'll connect  
your new homes to  
electricity and gas.

*e.on*

# Your connection journey

You'll have a dedicated field account manager and co-ordinator to help and support you at every step.

## 1. Registering your site

First, please complete the site Meter and Energy Supply application form for your residential plots and any associated commercial supplies. We'll email the form to you.

You can also download it at: [eonenergy.com/residentialconnectionsdownloads](https://eonenergy.com/residentialconnectionsdownloads)

## 2. Registering your supplies

You'll need to find out your electricity and gas supply numbers.

For electricity, this is known as your Meter Point Administration Number (MPAN) and you can get it from your local electricity distributor. If you're not sure who your distributor is, you can find out at [energynetworks.org](https://energynetworks.org)

For gas, it's called your Meter Point Reference Number (MPR). To get it, simply call the MPR enquiry line on **0870 608 1524** and ask for your MPR. We'll also need some details about your energy use.

## 3. Preparing for your meters

Once your site is ready and any relevant infrastructure work has been done, you'll need to get in touch with us 10 working days before you'd like your meters fitted, to arrange installation.

## 4. Fitting your meters

We offer flexible one day slots for meter fitting and will fit your meters on the day or days that suit you best. If the installation can't go ahead for any reason, then please let us know as least two working days before your appointment.

## 5. Validating your meters

Once your meters are fitted, we may visit your site and validate the meter serial numbers and address details.

## 6. Helping you hand over to homeowners

We'll give you hand over forms, so you can quickly and easily hand over the electricity and gas supply for each plot to the homeowner. You'll need to return completed forms to us within 10 days of legal completion. We'll also provide you with welcome packs for homeowners, which will explain all they need to know about their energy supply when they move in. We'll check the postal information for each plot too, to make sure important information about their electricity and gas doesn't go astray. Once everything is in the homeowner's name, we'll send you a final bill, based on the meter reading you've given us.

## 7. And finally

Your Field Account Manager will be on hand to help you with any other projects or sites you may have, both now and in the future.
